this book is intended as a teacher's manual and as an independent study handbook for students and mathematical competitors based on a traditional teaching philosophy and a non traditional writing approach the stair step method this book consists of new problems with solutions created by the authors the main idea of this approach is to start from relatively easy problems and step by step increase the level of difficulty toward effectively maximizing students learning potential in addition to providing solutions a separate table of answers is also given at the end of the book a broad view of mathematics is covered well beyond the typical elementary level by providing more in depth treatment of

geometry and trigonometry number theory algebra calculus and combinatorics
